

Arnau Lopez Selles

Junior Software Developer (Full-Stack) | Alcoy, Spain. Open to relocation.

lopezsellesarnau@gmail.com · github.com/lopezsellesarnau-cmd · linkedin.com/in/arnau-lopez-selles · arnau-lopez.com

SUMMARY

Junior full-stack software developer with a design background, based in Spain. I cofounded and developed Aithority, an EU AI Act compliance SaaS (May to Oct 2026). I also build my own products end to end: Kiblo, a dog-food iOS app live in the US and Canada; Dross, a Mac app and CLI that catches when frontend and backend stop agreeing; an F1 race-strategy model; and a tracker of the junior developer job market in Europe. I design the interface and write the code. I use AI in my workflow. Python is my strongest language (University of Helsinki MOOC in progress); TypeScript is where my shipped products live.

SELECTED PROJECTS | WHY, WHO USES IT, PROBLEMS SOLVED

Kiblo. Dog-owner iOS app, live on the App Store in the USA & Canada.

TypeScript, React Native (Expo), Firebase, RevenueCat, Figma | <https://kiblo-web.vercel.app>

- **Why:** food-scanner apps stop at a score and trackers stop at a log. No app connected the bag in the cupboard to the right portion and the next order.
- **Used by:** Live on the App Store in the USA & Canada.
- **Solved:** grams per day from the vet RER formula with a deterministic engine, not an LLM (a wrong health answer is worse than none). RevenueCat rejected valid credentials: the Bundle ID was not an exact match.

Dross. Mac app + CLI that catches frontend/backend drift before deploy.

TypeScript compiler API, SwiftUI | Open source, notarized DMG | <https://github.com/lopezsellesarnau-cmd/dross>

- **Why:** my own projects kept shipping bugs that were valid code but wrong meaning: a dead endpoint, demo data reaching production, a backend that required a token the app never sent.
- **Used by:** me, on TRACE and Aithority, where it caught real drift. Open source and shared on social media.
- **Solved:** regex gave false positives, so it reads code with the TypeScript compiler API; a labelled corpus must pass at 100% precision and recall or CI fails.

Formula 1 Strategy Agent. ML project.

Python, pandas, scikit-learn, FastF1 API, SQLite | <https://github.com/lopezsellesarnau-cmd/F1-Strategy-Agent>

- **Why:** to learn ML on data I care about, filming the build for social media.
- **Used by:** viewers asked for the code in the comments, so I open-sourced it.
- **Solved:** a model trained on Jeddah + Bahrain failed on unseen circuits (3.49s error). Predicting each circuit's delta over its own base pace cut it to 0.73s on Suzuka.

Dev Job Tracker EU. Junior dev job market in Spain, NL, Germany and Belgium.

Python, FastAPI, SQLite, HTML/CSS/JS, Adzuna API | <https://github.com/lopezsellesarnau-cmd/Dev-Job-Tracking-EU>

- **Why:** I wanted real numbers for my own job search instead of US articles, and a project where every decision is written down and explained.
- **Used by:** me. Its data changed my search: generic titles (software developer, full-stack) have the most openings and fewer senior-only roles.
- **Solved:** counts were inflated because the API searched job descriptions (Germany frontend 4,405); title-only search gave 575. Job titles differ by language, so each role sums its local variants.

EXPERIENCE

Aithority. EU AI Act compliance SaaS

Cofounder and developer | May 2026 – Oct 2026

- **Why:** startups and scale-ups using AI need to audit their AI systems and know if they comply with the EU AI Act. Our audits flagged tools like Cursor and Chinese AI models as compliance risks.
- **Used by:** tested with companies in the Lanzadera accelerator, such as LaiaDesk. I ran the conversations with founders about their problems myself.
- **Solved:** setup took over 7 minutes; I cut it to three steps: connect Microsoft 365, Google Workspace or an Anthropic/OpenAI admin key, Claude Haiku suggests a risk class, a human confirms. Data vanished on every Render redeploy; I moved the database to Turso. I built backend, frontend and UI.

Deutsche Post (DHL Group). Logistics and operations

Paderborn, Germany | Aug 2024–Apr 2026 (~2 years)

- Full-time logistics operations role in the DACH region, real day-to-day exposure to how a major European logistics network actually runs.
- Alongside the job, built and launched my own Shopify store for beauty products targeting the Netherlands and Germany: first real product I ran solo, end to end.
- EU citizen, no sponsorship needed. Open to full-stack and software developer roles in Spain and the EU; German is A2.

HOW I USE AI

I work in loops with AI: each pass has conditions, and if they fail I look at why and rebuild. I set the product and design constraints; the model does not decide what ships. As a junior I use it to move faster on technologies I'm still building speed on, like React, and to debug, while writing my fundamentals by hand (Python, SQL, HTML/CSS/JS).

SKILLS

Top skills: Python, JavaScript, TypeScript, HTML/CSS, React, React Native (Expo), Next.js, FastAPI, SQL (SQLite), Firebase.

Design: UX/UI, Figma, design systems, Figma to code.

AI tools: Claude (Anthropic), Cursor, Codex.

Languages: Spanish (native), Catalan (native), English (professional), German (A2).

STUDIES

University of Helsinki

Programming MOOC (Python) · in progress

University-affiliated introductory CS curriculum (programming-26.mooc.fi).

EASD Alcoy

Plastic Arts Technician and Layout Assistant for Printed Graphic Products | Sept 2021 – June 2023

Certifications

Anthropic, Claude Code in Action, Claude Academy (Aug 2026). Google Cloud Skills Boost, Generative AI fundamentals (Aug 2026).

Based in Alcoy, Spain. Open to relocation within the EU.
