Arnau Lopez Selles

Product Engineer (AI) · React, React Native, TypeScript, Next.js, Supabase, Python

Amsterdam, Netherlands · EU citizen, open to relocation · lopezsellesarnau@gmail.com · arnau-lopez.com · github.com/lopezsellesarnau-cmd · linkedin.com/in/arnau-lopez-selles

SUMMARY

Junior product engineer with a design background: I design and build AI products. I'm building Hilo, an AI voice companion for older people with a web app for care organisations, where I chose the models, wrote the prompts and designed every screen. I built Casa with a remote team at the Open Agent Hackathon 2026, and I was the developer cofounder of Aithority, an EU AI Act compliance SaaS. I work with React, React Native, TypeScript, Next.js, Supabase and Python, design in Figma, and use AI tools in my workflow while I keep learning the technologies I haven't fully mastered yet.

EXPERIENCE

Founder and Product Engineer, Hilo (AI voice companion for older people)

Amsterdam, Netherlands | Oct 2026 – Present | React Native, Expo, TypeScript, Supabase, Claude API, Azure Speech, Figma | hilo-web.vercel.app

- Designed and built an iPhone and iPad app (in App Store review) where older people who live alone talk with Claude every day by voice, get pill reminders and build a book of their life from their own words. Chose Haiku for the talk and Sonnet for the stories, with tools and structured outputs.
- Built a web app for care organisations: a daily list of who to call and why, a page per person and monthly reports with a validated loneliness scale (UCLA-3).
- Privacy by design: staff and family never read the talks, talks are deleted after 90 days, staff use two-factor and every page they open is logged. Supabase in the EU with row level security.

Backend and AI Developer, Casa · Open Agent Hackathon 2026 (team of three)

Remote | Oct 2026 | TypeScript, Node.js, NVIDIA Nemotron, Zetaris, Cursor | github.com/lopezsellesarnau-cmd/before-you-pay

- Built in 6 days with a remote team across different countries: agents that check a rental listing in Spain before you pay the deposit, against Catastro, the official rent index and the law.
- Built the backend, the data and the agents: a planner, specialist agents and a critic that drops any finding without a source. Split the work with a product designer and a developer, and reviewed each other's pull requests.

Cofounder and Full-Stack Developer, Aithority (EU AI Act compliance SaaS)

Valencia, Spain (Lanzadera accelerator) | May 2026 – Oct 2026 | Next.js, TypeScript, Node.js, Turso, REST APIs, Claude API

- Built the product from frontend to backend, with integrations with Microsoft 365, Google Workspace and the OpenAI and Anthropic admin APIs so companies could import their AI tools.
- Reduced onboarding from over 7 minutes to 3 steps: connect a workspace, the system appears, the AI suggests a risk class and a person confirms.
- Designed risk classification with deterministic rules first and Claude only proposing, because in a legal product a confident wrong answer is worse than none.
- Found why user data disappeared on every redeploy (no persistent disk) and migrated the database from SQLite to Turso, verified with 81 tests.

Mail and Parcel Delivery (Postbote), Deutsche Post DHL Group

Paderborn, Germany | Aug 2024 – Apr 2026

- Delivered letters and parcels in a German-speaking team, including the Christmas peak. Learned to code alongside the job and ran two online stores (Shopify) for the Netherlands and Germany.

PROJECTS

Kiblo, iOS app for dog owners (live on the App Store, US and Canada)

React Native, Expo, TypeScript, Firebase, RevenueCat, Figma | kiblo-web.vercel.app

- Calculates the daily grams from the dog's age, weight and activity with the veterinary RER formula in a deterministic engine (not an LLM), creates meal plans from 47 real recipes and reminds the owner to reorder before the food runs out.

Dross, macOS app and CLI that finds frontend and backend drift before deploy (open source)

TypeScript, TypeScript compiler API, SwiftUI, GitHub Actions | github.com/lopezsellesarnau-cmd/dross

- Finds bugs that pass the linter but are wrong in meaning (dead endpoints, missing auth tokens, demo data in production) with the TypeScript compiler API. CI fails unless a labelled test set passes at 100% precision and recall.

Other projects (open source)

- **F1 Strategy Agent:** machine learning model on real race data (Python, pandas, scikit-learn). Reduced lap-time prediction error on unseen circuits from 3.49s to 0.73s.
- **Ukraine War Tracker:** live data site (FastAPI, SQLite, Chart.js) updated every day by a GitHub Action, built so re-runs never duplicate data. ukraine-war-tracker.vercel.app

SKILLS

Languages and frameworks: JavaScript, TypeScript, Python, HTML, CSS, React, Next.js, React Native (Expo), Node.js, FastAPI, Tailwind.

Data and backend: REST APIs, SQL, SQLite, PostgreSQL (Supabase), Turso, Firebase, API integrations (Microsoft Graph, OpenAI, Anthropic).

Tools: Git, GitHub, GitHub Actions (CI), automated testing, Vercel, Render, Figma, Stripe, RevenueCat.

AI: Claude API (tools, structured outputs, prompt caching), agents, Claude Code, Cursor, Codex.

Languages: Spanish (native), Catalan (native), English (professional), German (A2).

EDUCATION

Programming MOOC (Python), University of Helsinki · in progress

Intermediate Vocational Diploma in Plastic Arts and Design (Graphic Design), EASD Alcoy · 2021 – 2023

CERTIFICATIONS

Claude Code in Action, Anthropic (Aug 2026) · Generative AI Fundamentals, Google Cloud Skills Boost (Aug 2026)
